                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              NUCLEOTIDE SEQUENCE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             mitted (SEP-2003) to the EMBL/GenBank/DDBJ databases.

DOWAIN: The WSXWS motif appears to be necessary for proper protein folding and thereby efficient intracellular transport and cell-surface receptor binding (By similarity).

BOMAIN: The box 1 motif is required for JAK interaction and/or actives for the form the form of the following 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              mouse cDNA sequences.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     activation (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           181

SUBUNIT: Noncovalent dimer of an alpha and a beta chains. IL2R exists in 3 different forms: a high affinity dimer, an intermediate affinity monomer (beta chain), and a low affinity monomer (alpha chain). The high and intermediate affinity forms also associate with a gamma chain (By similarity).

SUBCELLULAR LOCATION: Membrane; single-pass type I membrane
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         subfamily.
SIMILARITY: Contains 1 fibronectin type-III domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               activation SIMILARITY:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      folding and thereby efficient intracellular transport as surface receptor binding (By similarity).

DOMAIN: The box 1 motif is required for JAK interaction

RA Submitted (SEP-2005) to the EMBL/GenBank/DDBJ databases.

RC :- FUNCTION: Receptor for interleukin-2. This beta subunit is completed in receptor mediated endocytosis and transduces the involved in receptor mediated endocytosis and transduces the complete signals of II2 (By similarity).

RC :- SUBUNIT: Noncovalent dimer of an alpha and a beta chains. IL2R componer (signals endiny monomer (beta chain), and a low affinity componer (signals chain). The high affinity dimer, an intermediate affinity forms componer (alpha chain). The high and intermediate affinity forms componer (alpha chain). The high and intermediate affinity forms componer (alpha chain). The high and intermediate affinity forms componer (alpha chain). The similarity) is similarity).

RC :- SUBCELLULAR LOCATION: Membrane; single-pass type I membrane componer in the MSXMS motif appears to be necessary for proper protein componer protein componer protein componer componer by similarity).

RC :- DOMAIN: The WSXMS motif appears to be necessary for proper protein component componer by similarity).

CC :- DOMAIN: The box 1 motif is required for JAK interaction and/or component co

Structure 2:839-851(1994).

-I- FUNCTION: Receptor for interleukin-2. This beta subunit is involved in receptor mediated endocytosis and transduces the mitogenic signals of IL2.

-I- SUBUNIT: Noncovalent dimer of an alpha and a beta chains. IL2R exists in 3 different forms: a high affinity dimer, an intermediate affinity monomer (beta chain), and a low affinity monomer (alpha chain). The high and intermediate affinity forms also associate with a gamma chain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     [6]

                              protein.
DOMAIN:
folding
                                                                                                          FUNCTION: Receptor for interleukin-2. This beta subunit is involved in receptor mediated endocytosis and transduces the mitogenic signals of IL2.
SUBUNIT: Noncovalent dimer of an alpha and a beta chains. IL2R exists in 3 different forms: a high affinity dimer, an intermediate affinity monomer (beta chain), and a low affinity monomer (alpha chain). The high and intermediate affinity forms also associate with a gamma chain.
SUBCELLULAR LOCATION: Membrane; single-pass type I membrane
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         461

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
